

Delivering technology assurance solutions and asset management services since 1994.

Data Vista Corporate Overview

History

Data Vista, Inc. has been delivering technology assurance solutions and technology asset management services to leading companies since 1994. Although Data Vista started as an Independent Service Provider (ISP) and Third-Party Maintenance (TPM) company, we have steadily expanded our portfolio of services and product offerings over the years to become a full service Technology Life Cycle Management organization.

Data Vista provides best of breed products and services to address any vertical market:

- Automotive
- Banking
- Consumer Goods
- Education
- Energy
- Financial
- Food and beverage
- Government
- Healthcare
- Insurance
- Manufacturing
- Media
- Online
- Real estate
- Retail
- Technology
- Telecommunications

Expertise

Our company expertise lies with the IT backbone infrastructure that runs Microsoft® OS, legacy UNIX®, and the latest Linux OS, all of which are used to support mission-critical business processes as well as desktop environments. Some customer environments align to a single manufacturer, but most are heterogeneous, multi-vendor, multi-platform infrastructures. Our extensive knowledge in IT infrastructure allows us to support these complicated systems.

Value

Our forte is exceptional equipment uptime for those complex infrastructures, and our reputation for these services is one of unmatched value. We address all stages of the technology life cycle from acquisition through disposal, in addition to wall-to-wall coverage of most technology products.

Industry Compliance

Data Vista services are compliant with various industry standards, regulatory policies and procedures applicable to all vertical markets. This enables us to accommodate the technology lifecycle needs of clients in all industries.

Geographical Coverage

Serving customers throughout North America and some international locations, Data Vista is headquartered in Westampton, New Jersey with a growing number of direct regional offices. Our 20,000 square-foot headquarters facility is conveniently located in proximity to the major airports serving Philadelphia, New Jersey, and New York City. Our headquarters house our corporate offices, major technical support centers, equipment-testing laboratories, data centers, repair depot, and spare-parts warehouse.
